

Cash cassettes

## ANKER Universal Cash Cassette UCC

### Metal cassette according to the ANKER principle

We also offer a solution to the proponents of metal housings, with the ANKER Universal Cash Cassette UCC, which fits in the well approved ANKER principle. The assembly of the outer housing is performed in the established manner, on a base plate. This allows easy dismantling for cleaning purposes. However, in contrast to our plastic cassettes, the base is delivered without any electronics, as they are installed in the outer housing. Upon request, the assembly of the outer housing is also possible without a base.

The UCC is directly opened electronically by the cash register system. The outer cassette is available with a quality lock or completely without a lock. For the inner cassette, a quality lock or a turnkey are available. The turnkey is a keyless version, with which a bolt in the lid can be engaged, to close the inner cassette.

#### Technical data

| Width  | Height | Depth  | Weight  | Interface                   |
|--------|--------|--------|---------|-----------------------------|
| 460 mm | 100 mm | 169 mm | 4,84 kg | compatible with all systems |

> Removable outer cassette: a plus in terms of cleanliness

> Flexible configuration of the coin and note compartments

> Inner cassette with integrated lid

> User-friendly with a removable cable

**Reliable at every POS**

The extremely light inner cassette **of the UCC made of plastic has an integrated sturdy lid**. This makes the tedious handling unnecessary, which would have been created with a separate cover. Additional separate inner cassettes are available for changing cashier personnel. The removal and insertion of the inner cassette is made significantly easier for you due to the integrated and retractable carrying handles. The handles are attached to the side, which ensure optimum weight distribution and easy removal of the insert.

**Longlasting and user-friendly**

You can mount the outer cassette directly onto the cash counter or lock it in using the previously mounted base plate. This attachment of the outer cassette is ideal for simple and quick exchange and straightforward cleaning. This ensures a plus in terms of cleanliness and servicing of the product. **The cable of the UCC** be easily and economically removed.

**Ergonomic benefits**

**The coin and note compartments, as well as the separate voucher compartment, can be configured by you within the inner cassette on the left or right, as you wish**. This improves the workplace ergonomics and provides more security at the cash counter, as the inner compartments can be positioned at larger distance away from the customer.
